Предговор

Стратешка определба на Државниот завод за статистика е да обезбеди транспарентност и информирање на корисниците за методологиите што се користат при продукцијата на определени статистички податоци.

 Во второто издание на Методологијата за пресметување на индексите на цените на извезената и на увезената стока даден е приказ на начините и постапката за пресметување на индексите вклучувајќи ја и обработката на индексите.

 При подготовката на Методологијата, Државниот завод за статистика ги почитување основните стандарди, дефиниици и препораки на ООН во оваа област.

 Се надеваме дека со оваа публикација корисниците ќе добијат повеќе сознанија за начинот на пресметка на податоците во оваа област, а сето тоа ќе им помогне за правилно користење на податоците за надворешната трговија во нивното работење.

Директор
Скопје, 2007 година

м-р Благица Новковска

PREFACE

The strategic orientation of State Statistical Office of the Republic of Macedonia is to ensure transparency and informing the users about the methodologies, which are used in the production process of specific statistical data.

In the second edition of Methodology for index calculations for price (unit value) of the exported and imported goods, the methods and procedures for compilation of indices including processing of indices is given.

The State Statistical Office of the Republic of Macedonia has respected UN Basic standards, definitions and recommendations in this area.

We hope that with this publication, the users will get more information about the production of data in this area and all that will assist them in correct use of data on foreign trade in their work.

Director

Методолошки основи

Цел

Индексите на цените на извезена и на увезена стока имаат за цел аналитички да ја следат динамиката на движењето на цените која најчесто се користи во макроекономските истражувања. Овие индекси во Државниот завод за статистика се пресметуваат според методот “единица вредност”.

Индексите на единаци вредност се користат за следење на промените во цените на извозот и на увозот во одреден временски интервал, за насочување на производството и меѓународната трговија, за споредување на националните и меѓународните серии за цените, за следење на промените кај главните извезени и увезени производи во рамките на надворешната трговија. Исто така, се користат и како дефлатори во системот на националните сметки.

Услови на трговување

Значајно мерило за развојот на економијата на една земја се условите на трговување. Условите на трговување се дефинирани како однос меѓу извозниот индекс на единаци вредност и увозниот индекс на единаци вредност:

\[
\frac{P_{\text{exp}}}{P_{\text{imp}}} = \frac{\text{индекс на единаци вредности-извоз}}{\text{индекс на единаци вредности-увоз}}
\]

Подобрувањето на условите за трговување може да биде израз на зголемената внатрешна продуктивност, а тоа значи дека може да се купат повеќе странски стоки за истата количина на извезените стоки, односно се зголемува домашното богатство.

Пресметката на индексите за надворешната трговија во оваа публикација се базира на единаци вредност од царинските декларации и се пресметани за група, отsek и сектор од СМТК-рев.4.

Предности и недостатоци на приодот со единаци вредност

Предности од изборот на приодот со единаци вредност во однос на анкетно истражување на индексот на извозно-увозните цени се:

- значително пониски трошоци при прибирањето на податоците, бидејќи не е потребно дополнително прибиране на податоци;
- јасна дефиниција на единаци вредност како однос на царинската вредност на соодветното количество (интерпретацијата на "цените" е понекогаш нејасна);
- опфатена е секоја трговска трансакција.

Главни недостатоци се:

- за поголем дел од извозот или увозот, во една статистичка ставка, постои микс од производи со различни квалитети;
- количествата понекогаш недостасуваат или се премногу грубо дефинирани;
- промените во квалитетот или во составот на производите од статистичката ставка се рефлекираат на единица вредност. Со подобрување на квалитетот, индексот на единица вредност ги пречнува актуелните промени во цените.

Формули за пресметување на индексите

Вредноста на еден производ се добива на следниов начин:

\[ V = P \times Q \]

каде што:

\( V \) = вредност

\( P \) = цена

\( Q \) = количество

Следнава формула го дава начинот на пресметување на единица вредност:

\[ P = \frac{\sum V_{it}}{\sum Q_{it}} = \frac{\sum P_{it} \times Q_{it}}{\sum Q_{it}} \]

\( V_{it} \) = вредност на производот, набљудувана во временски интервал \( t \)

\( P_{it} \) = цена на производот, набљудувана во временски интервал \( t \)

\( Q_{it} \) = количество на производот, набљудувано во временски интервал \( t \)

За секој производ од царинските декларации, за временскиот интервал \( t \), се агрегираат сите вредности од "m" извозни, односно увозни трансакции и соодветните количества. Потоа се делат вредностите со количествата и се добива р-единица вредност на соодветниот производ.

Индекси на цени (просечни вредности) на извезената и на увезената стока

За пресметување на индексите на цените се користат формулите на Ласпер и Паше:

Ласпер

\[ I_{p(i)} = \frac{\sum p_{1} \times q_{0}}{\sum p_{0} \times q_{0}} \]

\( p_{1} \) = цена во тековниот период

\( p_{0} \) = цена во базниот период

\( q_{0} \) = количество во базниот период

Паше

\[ I_{p(p)} = \frac{\sum p_{1} \times q_{1}}{\sum p_{0} \times q_{1}} \]

\( p_{1} \) = цена во тековниот период

\( p_{0} \) = цена во базниот период

\( q_{1} \) = количество во тековниот период

При пресметка на индексот на цените е користена формулата на Фишер која претставува квадратен корен од производот на Ласперовиот и Пашеовиот индекс на единица вредност \( F=\sqrt{L \times P} \). Овој пристап се применува поради потребите на Системот на национални сметки, затоа што во нивните пресметки се користат фиксните цени (од базната година) и промените во количествата, а тоа го овозможува формулата на Ласпер каде што како пондери се користат вредностите од базната година. Со тоа се исключуваат промените во цените, односно инфлаторните влијанија. Ова, пак, ја наметнува потребата за индексот на ценi да се користи индексот на Паше каде што како пондери се користат вредностите од тековната година, затоа што производот од Пашеовиот индекс на цени и Ласперовиот индекс на волумен ја дава релативната промена во вредноста од базната во тековната година.
Ова може да се прикаже математички:

\[ \sum q_0 p_0 - \sum q_1 p_1 - \sum q_0 p_1 = V_{01} \]

Стоковна листа и корекција на податоците

Листата на стоки кои се опфатени со пресметката на индексите е утврдена со номенклатурата на Хармонизираниот царински тарифа. Неопфатените стоки се всушност стоки кои во базниот или во тековниот период се застапени во стоковниот промет или, пак, нивното количество во базниот и во тековниот период е незначително или непоредно. Единечната цена за таквите производи, обично, е значително над или под просечната вредност и не е веродостоен показател на реалните движења на цените на стоките во извозот и во увозот. Производите кои постои голем варјабилитет во квалитетот и начинот на плакање, со што односот меѓу количеството и вредноста не ја репрезентираат просечната цена, во подолг период, исто така, се елиминираат од пресметката на овие индекси. Со оглед на специфичноста и структурата на извозот и на увозот, формирани се две посебни листи на производи за кои се врши пресметка на извозно-увозни индекси, една за извозот и една за увозот на стоки.

Во индексните пресметки не се вклучени делови од машини, уреди и апарати.

Постапка за пресметка на индексите на цените на извозните и увозните стоки

Основен предуслов за правилна пресметка на извозно-увозните индекси е да се направи правилен избор на базна година, односно период, и на репрезентативен примерок базиран на Хармонизираниот царински тарифа. При изборот на тарифните позиции кои ќе влезат во репрезентативниот примерок се применува следното:

- Се избираат тарифни ставки (производи) чија вкупна вредност во текот на годината е над 100 000 САД долари. Податоците се даваат месечно.

- Се утврдува фреквенцијата на секоја ставка по месеци. Одредено е критериум да биде 7 месеци (соодветниот производ е предмет на увоз во текот на седум месеци во текот на годината).

- Се утврдува едниница вредност за секој производ во секој месец и просечна едниница вредност за годината.

- Од утврдените просечни едниници вредност се пресметува степенот на близост со примена на следнава формула:

\[ (P_0 - \text{stdev}) / P_0 * 100 \]

\[ P_0 - \text{просечна едниница вредност}; \text{stdev} - \text{стандардна девијација} \]

Критериум е во репрезентативниот примерок да влезат сите производи чијото степен на близост е поголем од 50%. Меѓутова, потребно е да се изврши анализ на секоја ставка поединечно (на оние ставки кои се под 50% близост) за да се утврди причината зашто степенот на близост не е задоволувачки, дали поради големата разлика во едниниците на вредност во повеќе месеци или само во еден или два месеца. Ако разликата во едниниците вредност е голема само поради еден или два месеца, тогаш треба да се испита да не настанала некоја грешка на ниво на декларација во соодветниот месец (на пр.: преголема вредност или количина). Во тој случај се пристапува кон корекција, но не во декларацијата, туку само во едниница вредност.

- Следен чекор е утврдување на учителство на избраното примерок за извоз и увоз во вкупната вредност на извезената, односно увезената стока (репрезентативен процент). Вообичаено, процентот на учителството за увозот е помал од процентот на извозот и за извозот тој процент е околу 80%, а за увозот околу 60%.

- Се сметаат пондери (W) за секоја ставка (учето во вкупната вредност на повисоко ниво на агрегирање на производите).

- Се пристапува кон пресметка на самите индекси.
Основните индекси се пресметуваат врз основа на Хармонизираната царинска тарифа на 10 места, а потоа, со примена на соодветни пондери и врски, се пресметуваат и индекси на повисоко агрегирано ниво од СМТК, рев.4.

Ограничувања кај индексите на цените на извозот и на увозот на стоки

Веродостојноста и реалноста на овие индекси се ограничени од следниве причини: хетерогеноста на производите кои влегуваат во пресметката, бројот на опфатените производи, пондерациониот концепт на базните количества за одделни сложени производи од висока преработка (инвестиционана опрема, бродови, авиони, како и средства за широка потрошувачка), што не обезбедува адекватни агрегатни индекси за сите нивоа на кумулацијата.

Производите од една тарифна ставка на Царинската тарифа можат да бидат од различен квалитет иако се работи за исто наименување. Такви производи се, на пример, машини и соодветна опрема, стакло и керамика и други производи.

Од месец во месец може да се менува структурата на производите кои влегуваат во еден тарифен став, а со тоа настануваат промени во просечната вредност и покрај тоа што не настанале промени во цените на производите.

Фактор за ребазирање

Во оваа публикација е извршено ребазирање на индексите од 1998 до 2003 година. Претходна базна година беше 1998 година, а сега, како нова база е земена 2005 година со што го применуваме правилото при пресметување на индекси со базна година како база да се користи година што завршува на “0” или на “5”.

Methodological basis

Purpose

Price indices of the exported and imported goods aims to analyse the dynamic movement of these prices, which is used in other macroeconomic researching in the country. These indices in State statistical office of the Republic of Macedonia are calculated by the "unit value" method.

Unit value indices are the indicator for the changes in the prices of the export and import during the time, for giving the direction of the national production and the international trade, for international comparison of the, to follow up the changes in the main exported or imported goods in the framework of the external trade. Also these indices are used as deflators for the SNA purposes.

Terms of trade

The most important measure for the development degree of the country economy is the terms of trade. It is calculated as a change in the ratio of an export unit value index to an import unit value index.

\[
P_{\text{exp}} / P_{\text{imp}}
\]

- \(P_{\text{exp}}\) = export unit value index
- \(P_{\text{imp}}\) = import unit value index

If the terms of trade are increased that may be a result of the increased productivity in the country. That means that the country is in a position to buy more foreign products for the same quantity of the exported goods, which means that the internal wealth is increased.

External trade indices in this publication are based on the unit values from the customs declarations. The indices are calculated for subdivision, division and sectors of the SITC - rev 4.

Advantages and disadvantages of the unit value approach

The advantages of the unit value approach are:
- Lower costs for compiling the data, because there is no need for another survey for data compiling;
- A clear definition of the unit value as a ratio between the customs value and the quantity (the definition of the prices is sometimes not so clear);
- Almost all trade transactions are comprised;

The main disadvantages are:
- For a large part of the exported or imported goods there is only one tariff number which comprises a mix of goods with various qualities;
- Sometimes quantities are not available or are not clearly defined;
- The changes in the quality or in the content of the goods from the tariff number are to be reflected on the unit value. That means that when the quality is getting better than the unit value index will overestimate the actual changes in the prices.

Formulas for index calculations

The value of a product is getting from the formula:

\[V = P \times Q\]

Where:
- \(V\) = value
- \(P\) = price
- \(Q\) = quantity
The next formula provides the unit value:

\[ P_t = \frac{\sum V_t}{\sum Q_t} = \frac{\sum P_t \cdot Q_t}{\sum Q_t} \]

- \( V_t \): product value observed in the time interval \( t \)
- \( P_t \): product price observed in the time interval \( t \)
- \( Q_t \): product quantity observed in the time interval \( t \)

For each product from the declaration, for the time interval “\( t \)”, all the values and quantities are aggregated from “\( m \)” export or import transactions. Than the total value of the product is divided with the total quantity and that is the unit value of the product.

**Unit value indices (for the export and imported goods)**

For calculating the unit values indices are used the Lasperes and Pashe formulas:

**Lasperes**

\[ I_{p(0)} = \frac{\sum p_t \cdot q_0}{\sum p_0 \cdot q_0} \]

- \( p_t \): price in the current period
- \( p_0 \): price in the base period
- \( q_0 \): quantity in the base period

**Pashe**

\[ I_{p(0)} = \frac{\sum p_t \cdot q_t}{\sum p_0 \cdot q_t} \]

- \( p_t \): price in the current period
- \( p_0 \): price in the base period
- \( q_t \): quantity in the base period

Than for the final unit value indices the Fisher formula is used \( F = \sqrt{L \cdot P} \). This approach is used for the SNA purposes, because in their calculations the constant prices (from the base year) and the quantity changes are used, and that is provided by the Lasperes formula where as a weights are used the values from the base year. So the price changes or the inflation influences are excluded. For the price indices in the SNA calculations is used Pashe formula where as weights are used the values from the current year. These two indices Lasperes for the quantity and Pashe for prices give the relative changes in the value from the base to the current year:

\[ \sum q_1 p_0 \sum P_{p(0)} = \sum \frac{q_1 p_0}{p_1 q_0} \sum p_0 q_1 = V_{01} \]

**Commodity list and data correction**

The commodity list that refers to the index calculation, is affirmed by the Harmonised Custom Tariff nomenclature. Not included commodities are in fact the commodities, which are not presented into the basic or current period, and the participation in the mentioned periods is negligible or incomparable. The unit value of those commodities is usually substantially above or under the average value and it is not a reliable indicator of the real commodity prices movements in exports and imports. For the products where a big variety occur both in quality and the way of payment, they are eliminated of the further index processing, because the relation between the quantity and the value is not a representative for the average price in long term period. As for the specific nature of the structure of the exports and imports, two different groups of commodity lists are formed, one is for calculating indices in exports and the other one for calculating the same once in imports.

In the index calculations the spare parts for machines and apparatures are not included.

**Export - import index calculations**

The main precondition for a proper external trade index calculations is to choose the base year and the representative commodity sample based on Harmonized Customs Tariff nomenclature. Following these steps makes the selection:
- Selecting tariff numbers (commodities) with yearly value over 100 000 US $ (the data are given on a monthly base);
- The frequency of each commodity has to be at least 7 months (that means that the commodity is a subject of the external trade in 7 months in the year);
- Calculating the unit value \( (v/q) \) for each commodity in each month and the average unit value for the year \( (p_0) \);
- Calculating the degree of closeness according to the formula:
  \[
  \frac{(p_0 - \text{stdev})}{p_0} \times 100
  \]
  \( p_0 \) - average unit value; \( \text{stdev} \) - standard deviation;

The criteria is in the commodity sample to be involved the commodities with the degree of closeness over 50%. However all the other commodities has to be analysed in order to see why the degree of closeness is under 50%. The reason may be because of too high or too low unit value of the commodity in only one or two months. In this case the unit value will be investigate on a declaration level and if there is some error (in the quantity or in the value) it is allowed to make corrections in the unit value (not in the declaration).
- Next step is to calculate the value participation of the selected goods in the total import or export value (representative percentage). It is usual the percentage for the export to be higher than the percentage for the import, and for the export is about 80% and for the import about 60%;
- Calculating weights through the participation of each commodity value in the total value on higher degree of aggregation of the selected goods;
- Calculating indices.

The basic indices are calculated on a 10-digit level of the HS, and than are calculated indices on more aggregated levels of the SITC-rev4, by using weights and relations.

**Limitations in the export import indices**

The limitations of this indices are: the heterogeneity of the selected commodities; the number of the selected goods; the weighting concept of the complex products such as investment equipment, ships, planes, consumer goods; there is no adequate aggregated indices for all levels of the aggregation.

Commodities from one tariff number of the customs tariff may be with various qualities, such as machinery and its equipment, glasses and ceramics and other products.

The structure of the commodities in one tariff number may be changeable from month to month, and that causes changes in the average unit value nevertheless there is no changes in the prices of the commodities.

**Re-basing factor**

This publication contains re-based indices for the years from 1998 to 2003. Previous base year was 1998, and as a new base year is taken 2005, according to the rule for base year to be taken year which ends with “0” or “5”.

Re-basing of the unit value indices was performed by re-basing factor calculated on 2004 data. Calculation was made as a ratio between the yearly index for 2004 with a base 2005, and yearly index for 2004 with a base 1998. This ratio is a re-basing factor. Indices for 1998, 1999, 2000, 2001, 2002 and 2003 are multiplied with this re-basing factor.

**Medical and pharmaceutical products**

Essential oils and perfume materials; toilet, polish and cleaning preparations; Fertilizers, manufactured (other than those of group 272)

Plastics in primary forms

Chemical materials and products, n.e.s.

Leather, leather manufactures, n.e.s. and dressed furskins

Rubber manufactures, n.e.s.

Cork and wood manufactures (excluding furniture)

Paper, paperboard and articles of paper pulp, of paper or of paperboard

Textile yarn, fabrics, made-up articles, n.e.s., and related products

Non-metallic mineral manufactures, n.e.s.

Iron and steel

Non-ferrous metals

Manufactures of metals, n.e.s.

Power generating machinery and equipment

Machinery specialized for particular industries

General industrial machines and equipment, n.e.s., machine parts, n.e.s.

Office machines and automatic data-processing machines

Telecommunication and sound recording and reproduction apparatus and equipment

Electric machines, apparatus and appliances, n.e.s. and electric parts there of

Road vehicles (including air-cushion vehicles)

Prefabricates buildings; sanitary plumb.

Furniture and parts there of Travel goods, handbags and similar containers

Articles of apparel and clothing accessories

Footwear

Professional, scientific and controlling instruments and apparatus, n.e.s.

Photographic apparatuses, equipment and supplies and optical goods; watches

Miscellaneous manufactured articles, n.e.s.

</table>

**GENERAL**
- Food and live animals
- Beverages and tobacco
- Crude materials except fuels
- Animal and vegetable oils, fats and waxes
- Chemicals and related products
- Manufactured goods classified chiefly by material
- Machinery and transport equipment
- Miscellaneous manufactured articles
- Meat and meat preparations
- Dairy products and bird's eggs
- Fish, crustaceans and molluscs and preparations thereof
- Cereals and cereal preparations
- Vegetables and fruit
- Sugars, sugar preparations and honey
- Coffee, tea, cocoa, spices, and manufactures thereof
- Feeding stuff for animals (not including unmilled cereals)
- Miscellaneous edible products and preparations
- Tobacco and tobacco manufactures
- Hides, skins and furskins, raw
- Oil seeds and oleaginous fruits
- Cork and wood
- Pulp and waste paper
- Textile fibres (other than wool tops), w. aces; not manufactured
- Crude fertilizers and minerals (exccl.coal, petrol, precious stones)
- Crude animal and vegetable materials, n.e.s.
- Coal, coke and briquettes
- Petroleum, petroleum products and related materials
- Fixed vegetable fats and oils, crude, refined or fractionated
- Animal or vegetable fats and oils, processed; animal or vegetable waxes
- Organic chemicals

Non-metallic mineral manufactures, n.e.s.
Iron and steel
Non-ferrous metals
Manufactures of metals, n.e.s.
Power generating machinery and equipment
Machinery specialized for particular industries
General industrial machines and equipment, n.e.s., machine parts, n.e.s.
Office machines and automatic data-processing machines
Telecommunication and sound recording and reproduction apparatus and equipment
Electric machines, apparatuses and appliances, n.e.s. and electric parts there of
Road vehicles (including air-cushion vehicles)
Prefabricates buildings; sanitary plumb.
Furniture and parts there of
Travel goods, handbags and similar containers
Articles of apparel and clothing accessories
Footwear
Professional, scientific and controlling instruments and apparatus, n.e.s.
Photographic apparatuses, equipment and supplies and optical goods; watches
Miscellaneous manufactured articles, n.e.s.

</table>

**Note:** The table above lists the monthly indices in 1999 for import unit value, indexed against 2005 = 100, using Laspeyres method. The indices indicate the change in the price level of imported goods compared to the base year. The table includes various categories such as metals, fuels, and agricultural products, with specific subcategories and their corresponding indices for each month.

**GENERAL**
- Food and live animals
- Beverages and tobacco
- Crude materials except fuels
- Mineral fuels, lubricants and related materials
- Animal and vegetables oils, fats and waxes
- Chemicals and related products
- Manufactured goods classified chiefly by material
- Machinery and transport equipment
- Miscellaneous manufactured articles
- Meat and meat preparations
- Dairy products and bird's eggs
- Fish, crustaceans and molluscs and preparations thereof
- Cereals and cereal preparations
- Vegetables and fruit
- Sugars, sugar preparations and honey
- Coffee, tea, cocoa, spices, and manufactures thereof
- Feeding stuff for animals (not including unmilled cereals)
- Miscellaneous edible products and preparations
- Beverages
- Hides, skins and furskins, raw
- Oil seeds and oleaginous fruits
- Crude rubber (including synthetic and reclaimed)

**Црвени растителни масла**: Fixed vegetable fats and oils, crude, refined or fractionated

**Животински и растителни масла-неспомнати**: Animal or vegetable fats and oils, processed; animal or vegetable waxes

**Хемиски елементи и соединенија**: Organic chemicals

**Катран и сирохи хемикалии**: Inorganic chemicals

**Бои и материи за павење**: Dyeing, tanning and colouring materials

**Медицински и фармацевтски производи**: Medical and pharmaceutical products

**Етерски масла и козметика**: Essential oils and perfume materials; toilet, polish and cleaning preparations

**Вештачки губрива**: Fertilizers, manufactured (other than those of group 272)

**Пластични материи во примарен облик**: Plastics in primary forms

**Пластични матери, вештачки смола**: Plastics in non-primary forms

**Хемиски матери и производи неспомнати**: Chemical materials and products, n.e.s.

**Кожа и изработки од кожа**: Leather, leather manufactures, n.e.s. and dressed furskins

**Изработки од гума**: Rubber manufactures, n.e.s.

**Изработки од дрво и плута**: Cork and wood manufactures (excluding furniture)

</table>

Paper, paperboard and articles of paper pulp, of paper or of paperboard.
Textile yarn, fabrics, made-up articles, n.e.s., and related products.
Non-metallic mineral manufactures, n.e.s.
Iron and steel.
Non-ferrous metals.
Manufactures of metals, n.e.s.
Power generating machinery and equipment.
Machinery specialized for particular industries.
General industrial machines and equipment, n.e.s., machine parts, n.e.s.
Office machines and automatic data-processing machines.
Telecommunication and sound recording and reproduction apparatus and equipment.
Electric machines, apparatuses and appliances, n.e.s. and electric parts there of.
Road vehicles (including air-cushion vehicles).
Prefabricates buildings; sanitary plumb.
Furniture and parts there of.
Travel goods, handbags and similar containers.
Articles of apparel and clothing accessories.
Footwear.
Professional, scientific and controlling instruments and apparatus, n.e.s.
Photographic apparatuses, equipment and supplies, optical goods, watches.
Miscellaneous manufactured articles, n.e.s.

**GENERAL**

- Food and live animals
- Beverages and tobacco
- Crude materials except fuels
- Mineral fuels, lubricants and related materials
- Animal and vegetables oils, fats and waxes
- Chemicals and related products
- Manufactured goods classified chiefly by material
- Machinery and transport equipment
- Miscellaneous manufactured articles
- Fish, crustaceans and molluscs and preparations thereof
- Feeding stuff for animals (not including unmilled cereals)
- Miscellaneous edible products and preparations
- Hides, skins and furskins, raw
- Oil seeds and oleaginous fruits
- Crude rubber (including synthetic and reclaimed)
- Cork and wood

### Notes
- The table above lists indices for various categories of exports, including food and live animals, beverages and tobacco, crude materials, etc.
- The indices are presented for each month from January to December, with the base year 2005 set at 100.
- The data includes indices such as General, Food and live animals, Beverages and tobacco, Crude materials, etc.

---

**Graphic Design**

- Image: [Image of the table]
- Text: [Textual representation of the table]

---

**References**

- [Monthly indices in 2004: General]
- [Details on the categories and indices provided]

---

**Additional Information**

- The table contains a comprehensive list of export categories, with indices for each month.
- The data is presented in a clear and organized manner, making it easy to read and understand.
- The table includes a variety of export categories, each with its own index.

---

**Conclusion**

- The table provides valuable insights into the export data for 2004, with indices for various categories.
- The data is presented in a format that is easy to interpret and compare.
- The table is a useful tool for analyzing export trends and patterns.

**MONTHLY INDICES IN 2005**

**IMPORT UNIT VALUE INDEX (2005=100)** - PAASCHE

- Cork and wood manufactures (excluding furniture)
- Paper, paperboard and articles of paper pulp, of paper or of paperboard
- Textile yarn, fabrics, made-up articles, n.e.s., and related products
- Non-metallic mineral manufactures, n.e.s.
- Iron and steel
- Non-ferrous metals
- Manufactures of metals, n.e.s.
- Power generating machinery and equipment
- Machinery specialized for particular industries
- General industrial machines and equipment, n.e.s., machine parts, n.e.s.
- Office machines and automatic data-processing machines
- Telecommunication and sound recording and reproduction apparatus and equipment
- Electric machines, apparatus and appliances, n.e.s. and electric parts there of
- Road vehicles (including air-cushion vehicles)
- Prefabricates buildings; sanitary plumb.
- Furniture and parts there of
- Travel goods, handbags and similar containers
- Articles of apparel and clothing accessories
- Footwear
- Professional, scientific and controlling instruments and apparatus, n.e.s.
- Photographic apparatus, equipment and supplies and optical goods; watches
- Miscellaneous manufactured articles, n.e.s.
