GENERAL INSTRUCTION

The Monthly Statistical Bulletin is one of the oldest editions of the State Statistical Office, in which data for the last month, as well as statistical series for a longer period of time are published.

Following the requests of users, as well as the changes in the statistical system of the Republic of Macedonia, the State Statistical Office has included new topics in the Bulletin.

The data in the Monthly Statistical Bulletin are preliminary data, and minor errors and omissions are corrected in the next issues of the Bulletin.

The part on "Methodological explanations" contains explanations on the used methodology and the method of data collection, which should make easy the use of data.

All data published in the Monthly Statistical Bulletin are a result of the work of the official statistical institutions and therefore represent official data.

SYMBOLS AND ABBREVIATIONS

- no occurrence of event
- ... data not available
- Ø average
- 0 value is less than 0.5 of the unit of measure being used
- 0.0 value is less than 0.05 of the unit of measure being used
- 1) footnote beneath table
- () incomplete or insufficiently verified data
- * corrected data
- Q quarterly data

METHODOLOGICAL EXPLANATIONS

GROSS DOMESTIC PRODUCT

The quarterly gross domestic product calculations are based mainly on the short-term indicators produced by the State Statistical Office and other relevant institutions.

The data for the respective quarter are published as estimated data. Along with the publication of data for each quarter, revised data for the previous quarters are also published. With each revision of the annual gross domestic product data, a revision of the quarterly gross domestic product data is done, as well.

Definitions

Gross domestic product at market prices is the final result of the production activity of the resident producer units and is a sum of the gross value added of the various institutional sectors or the various industries at basic prices plus value added tax, import duties less subsidies on products (which are not allocated to sectors and industries).

Value added at basic prices is the basic category of the gross domestic product and it is defined as a balance between the gross output and the intermediate consumption.

The GDP according to the expenditure approach presents the final consumption, i.e. the consumption of final goods and services produced in the domestic economy, the gross capital formation and the net export and import of goods and services.

Data sources

For quarterly GDP estimations the following sources are used: annual GDP estimations, data from the Ministry of Finance for the respective quarter, data from the National Bank, data from the regular monthly and quarterly surveys of the State Statistical Office and additional data from different institutions.

Method of calculation

Gross domestic product at constant prices is calculated by using the double indicators method. Quarterly GDP growth rates by production approach are calculated using 2005 as a reference year. Because of the chain-linking method applied in the calculations, non-additivity of the data appears.

For the calculation of final consumption at current prices data from the Household budget survey are used, as well as administrative data sources and other relevant sources.

The calculation of Gross capital formation is based on the commodity flow method in the part for machinery and equipment and on the data from surveys in the State Statistical Office that are used for estimation of construction and change in inventories. Data on export of goods and services and import of goods and services are calculated on the basis of the data from the National Bank of the Republic of Macedonia.

INDUSTRY

Sources and methods of data collection

Sources of data are the results from the Monthly Report on Industry IND.1 for industrial production, stocks and persons in paid employment in the field of industry.

The reporting method is used for collecting data. The reporting units send their Monthly Report on Industry to the regional statistical office within a specified time frame, according to the Programme for Statistical Surveys in the Republic of Macedonia for the determined year.

The data sources are the book keeping and the personnel records, as well as the documentation available at the reporting unit.

Coverage and observation units

The observation units are the enterprises and the local units, which according to the National Classification of Activities are distributed in the industry sections: B - Mining and Quarrying, C - Manufacturing Industry and D - Electricity, Gas and steam and air conditioning supply.

The Monthly Report on Industry, IND.1, also includes the local units whose main activity is industry, even though their parent enterprise does not belong to industry, but to forestry, construction etc. The enterprises that operate in more than one municipality are divided in as many units as there are municipalities they operate in.

Calculation method

The industrial production index for different levels of the National Classification of Activities (total, group, division and section) is calculated in two steps: in the first step the indices are calculated by weighting the individual indices of the quantities of industrial products, and in the second step, by weighting with adequate weight coefficients for different activity levels.

The monthly industrial production indices are calculated by the Laspeyres formula.

Weighting coefficients of the products in the National Nomenclature of Industrial Products, which are used in the calculation of the Industrial Production Index, are calculated on the basis of the production value of the 2005 Industrial Annual Report and the value added for 2005 from the Sector of National Accounts, and are revised every five years.

Indices of stocks are calculated on the basis of the volume of stocks of industrial products, on the last day of the reporting month.

Indices of the persons in paid employment in the field of industry are calculated from the data on persons employed by type of activity.

Classifications

Classifications used for the Monthly Report on Industrial Production, Stocks and Employees in Industry, and for publishing of the results are: the National Classification of Activities - NKD Rev.2 (according to the Decision on the National Classification of Activities - NKD Rev.2 published in Official Gazette of the Republic of Macedonia No. 147/2008) and the National Nomenclature of Industrial Products 2008 (Official Gazette of the Republic of Macedonia No.75/2009).

Recommendations

The Monthly Report on Industry, IND.1, is based on the EUROSTAT Recommendations in the Methodology for Short-Term Business Statistics, 2006, and is harmonized in accordance with the Regulation No.1165/98 of the European Commission on Short-Term Statistics.

CONSTRUCTION

Sources and methods of data collection

The data are obtained from the Monthly Statistical Report on Construction - GRAD. 21.

Coverage

The Monthly Statistical Report on Construction - GRAD. 21 covers the largest business entities engaged in construction activities, as well as business entities that according to National Classification of Activities - NKD Rev.2 are not classified in the construction industry, but they perform some construction activities of larger extent. This scope covers more than 90% of the total value of the completed construction works in the Republic of Macedonia.

Definitions

The value of completed construction works represents a value of really completed construction works (regardless if they are paid on unpaid) from the beginning of the year till the end of the reporting month. The value of completed construction works is obtained from the business entities' monthly reports, and is given in thousand denars, at current prices.

The data on effective hours refer to all employees with employment contracts according to the human resources records and include the hours realized in regular or overtime work, regardless if they are paid per hour or piece.

The number of employees refers to the situation on the last working day of the reporting month, but only for employees with employment contract according to the human resources records, regardless if they are unable to work or absent because of illness. The students attending practical work are not included.

Classifications

The construction works which are covered by the Monthly Statistical Report are in accordance with the Nomenclature of Constructions and Construction Works, which is made according to the classifications of Eurostat: for the part of the constructions the Classification of Types of Constructions is used, and for the part of construction works the statistical Classification of Products by Activity is used.

This adjustment of statistical surveys enables international data compatibility.

TRANSPORT AND OTHER COMMUNICATIONS

Source and methods of data collection

Passenger transport

The data are collected according to the reporting method through the regular monthly statistical reports in the field of passenger transport, according to the Programme for Statistical Researches in the Republic of Macedonia.

Urban-suburban transport

The data are collected according to the reporting method through the regular monthly statistical reports in the field of urban-suburban transport, according to the Programme for Statistical Researches in the Republic of Macedonia.

Railway transport

The data are collected according to the reporting method through the regular monthly statistical reports in the field of railway transport, according to the Programme for Statistical Researches in the Republic of Macedonia.

Air transport

The data are collected according to the reporting method through the regular monthly statistical reports in the field of air transport, according to the Programme for statistical researches in the Republic of Macedonia.

Post and telecommunications traffic

The data are collected according to the reporting method through the regular monthly statistical reports in the field of post and telecommunications traffic, according to the Programme for Statistical Surveys in the Republic of Macedonia.

Since 2003, the data on mobile phones are collected through the regular monthly statistical reports on mobile phones, according to the Programme for Statistical Surveys in the Republic of Macedonia.

Freight road transport

The data are collected according to the stratified purposive sample by weekly monitoring of the work performance of the chosen vehicles from the sample.

Scope

Passenger transport

Reporting units are all business subjects that according to the National Classification of Activities - NKD Rev.2 are in the section H, in the class: 49.39.

Urban-suburban transport

Reporting units are all business subjects that according to the National Classification of Activities - NKD Rev.2 are in the section H, in the class: 49.31.

Railway transport

Reporting units are all business subjects that according to the National Classification of Activities - NKD Rev.2 are in the section H, in the class: 49.10; 49.20

Air transport

Reporting units are all business subjects that according to the National Classification of Activities - NKD Rev.2 are in the section H, in the class: 51.10; 51.21.

Post and telecommunications traffic

Reporting units are all business entities that according to the National Classification of Activities - NKD Rev.2 are in the section H and J, in the class: 53.10; 61.10; 61.20.

Freight road transport

Reporting units are the road freight vehicles (including road tractors, also) property of legal and private subjects with freight capacity more than 3500 kg registered in the Ministry of Interior.

Definitions

Passenger transport

Kilometers run by the vehicle - kilometers run during the period of the reporting month are shown regardless if the ride was in function of transport or not.

Passenger - any person who purchases a ticket and enters in a bus for transport to a determined place.

Passenger - kilometer is a unit of measurement representing the transport of one passenger over a distance of one kilometer.

Urban-suburban transport

Transport of passengers - refers only to the transport performed at the urban and suburban lines in the urban area (taxi transport is not covered).

Vehicle kilometer - a unit of measurement representing the movement of a road motor vehicle over a distance of one kilometer. It includes movements of empty road motor vehicles (without passengers).

Railway transport

Data on passengers transported cover all the passengers transported with railway cars in the national and international transport.

Data on goods transported cover all transported goods with railway cars in the national and international transport.

Loaded goods - all goods loaded in national and international transport.

Unloaded goods - all goods unloaded in national and international transport.

Passenger is each person who uses railway car for transport, except for the crew of the railway car.

Passenger-kilometer is a unit of measurement representing the transport of one passenger by rail over a distance of one kilometer.

Goods transported represent a sum of all goods transported with railway cars.

Net-tonne kilometer is a unit of measurement of goods transport which represents the transport of goods in one wagon by rail over a distance of one kilometer.

Air transport

Data on passengers transported include all passengers who have arrived and departed in regular and charter transport.

Data on goods transported include all goods that have arrived and departed in regular and charter transport.

Post and telecommunications traffic

Data on mail parcels refer to mail parcels of ordinary and registered letters, postcards, printed materials, telephone bills, small packages, EMS letters delivered in the national and international traffic.

Data on parcels refer to parcels of ordinary, letters of value, hand and EMS letters delivered in the national and international traffic.

Telephone calls originated from fixed network - Include all calls that originated from the network of the national fixed operator, expressed in 1000 minutes, such as national calls (within the country), international calls (outgoing calls to another country), dial-up connection to Internet and others.

Calls originated from mobile cellular network - Include all national and international calls originated from subscribers to the national mobile operators expressed in 1000 minutes. Roaming calls are not included.

National calls from mobile cellular network - Total calls, in 1000 minutes, originated from subscribers to the national mobile operators and made within the country (originated and terminated in the Republic of Macedonia).

Freight road transport

Kilometers run by the vehicle represent the kilometers run by the vehicle with freight or empty.

Ton of goods is a unit of measure which represents the weight of goods.

Tonne-kilometer is a unit of measurement which represents the transport of one tonne by road over one kilometer.

Classifications

Glossary for Transport Statistics

Eurostat Council Regulation 1172 /98 on Statistics on the Carriage of Goods by Road

Classification of Countries, ISO-3166

Classification of Goods, NST

Eurostat Council Regulation 437/2003 on statistical returns in respect of the carriage of passengers, freight and mail by air

EXTERNAL TRADE

Data source

The data source for the external trade statistics is the Single Administrative Document (SAD) for exports and imports, whose content is adjusted for various purposes. The document is filled in with data for customs purposes, as well as for statistical and banking purposes.

The contents, the form and the way of filling in of the SAD are prescribed by the Manual for the Single Administrative Document and the other documents in the customs procedure.

Data scope

The external trade data are processed according to the special trade system (relaxed definition), based on the concept of the commodity crossing at the customs border.

The export, according to this principle, comprises all the goods exported abroad and in the foreign customs warehouses and industrial free zones, and whose origin is from the domestic market, the premises for further processing and the industrial free zones.

The import comprises all goods, imported from abroad, from customs transit, customs warehouses and industrial free zones. That means that import includes all the goods for which all duties and taxes are paid, and which are placed on the internal market, the premises for further processing or in the commercial free zones.

Observation units

Observation unit for the statistical survey on external trade of goods is each dispatch of goods in exports or imports, which is homogenous regarding the kind of goods, country of origin or destination, way of payment and the moment of border crossing.

Territory

The borders of the statistical territory are usually the same as the state borders, except when the external trade is performed through the free customs zones.

Time of observation and processing

Statistical processing of external trade data is performed on a monthly basis.

Export and import data are processed in the month in which the transaction is done, according to the time of lodgement the SAD form. Monthly data for the current year are corrected regularly each month. With the first data processing, about 98% of the total data are compiled. The additional data and the corrected data are added in the month when the goods transaction was done (the time of lodgement the SAD form). Because of this, the external trade data during the current year are treated as preliminary, until the final data are published.

Classifications

Statistical data processing and publishing are performed according to the following classifications and nomenclatures:

- Customs Nomenclature, based on the Harmonized System of Commodity Codes and Names and Combined Nomenclature of EU;
- Standard International Trade Classification (SITC);
- Classification of products by activity (CPA);
- Classification by Broad Economic Categories (BEC);
- Country Classification - 3166 ISO alpha - 2 code

The basic principles, standards, definitions and procedures for statistical processing of the external trade are based on the United Nations concepts and definitions for the external trade statistics (International Trade Statistics: Concepts and Definitions United Nations Statistical Papers, Series M, No.52, Rev 1 New York, 1982), on which the External Trade Methodology of the Statistical Department of the European Union (EUROSTAT) is also based.

INTERNAL TRADE

Sources and methods of data collection

Sources of data are the results from the Monthly Report on Turnover TRG.1 for turnover, number of persons employed and hours worked. The data are collected according to a stratified sample.

Scope

Observation units are mostly the enterprises whose principal activity is classified into sale and maintenance of motor vehicles, wholesale trade and retail trade.

The sampling frame of the survey includes all legal forms of enterprises that perform one of the trade activities in section G of the National Classification of Activities - NKD Rev. 2 as their main activity. The sample includes all large and medium business entities, while the rest were determined randomly. The criteria used are activity and turnover.

Definitions

Wholesale is purchase of goods for further sale to merchants, entrepreneurs, legal persons and others that purchase goods for performing their professional or profit-making activity.

Retail trade is purchase of goods for further sale to final users (for personal and household use).

Turnover comprises the totals invoiced by the observation unit during the reference period, and this corresponds to market sales of goods or services supplied to third parties. Turnover includes all taxes for goods and services, invoiced by the observation unit, except VAT. Turnover also includes all other charges (transport, packaging, etc.) passed on to the customer, even if these charges are listed separately in the invoice. Price reductions such as rebates, bonuses or discounts as well as other revenue reductions (e.g. annual discount schemes) are to be deducted from turnover.

Turnover does not include:

- Extraordinary income (e.g. from sales of capital assets),
- Non-operating income (e.g. income from letting or renting buildings used for no operating purposes),
- Financial income (e.g. interest payments, dividends from associated companies),
- Company-related subsidies.

Data publishing

Data published are shown in the form of indices. The data were calculated with 2010 as a constant base year, and calculated indices are not seasonally adjusted.

The indices reflect the short-term changes in the turnover between two compared periods. These are generally the reported month to the same month of the previous year.

Value indices (value in nominal terms): current prices are considered, and the impact of the change in prices is not eliminated.

Volume indices (value in real terms): by using deflators made up of consumer price indices the change in prices is eliminated.

Retail trade data are given by the following groups: Retail sale of food, beverages and tobacco (G47.11, 47.2); Retail sale of non-food products, except fuel (47.19, 47.4, 47.5, 47.6, 47.7, 47.8, 47.9); Retail trade, except automotive fuel (47 without 47.3) and Retail trade of automotive fuel (47.3).

PURCHASE AND SALE

Sources and methods of data collection

Data on the total purchase of agricultural products are taken from the regular monthly statistical surveys Purchase of Agricultural Products from Individual Producers (trade-31) and Sales of Agricultural Products from Own Production of Agricultural Enterprises and Agricultural Cooperatives (Agri-Trade - 33), which are used for monitoring 140 agricultural products.

Scope

As reporting units for these surveys occur all legal units (enterprises and agricultural cooperatives) that according to the National Classification of Activities are registered in the sector A, division 01, sector B, division 05, as well as enterprises that have registered local unit in the sectors A and B.

Definitions

Purchase of agricultural products from individual agricultural producers is purchase of agricultural products directly from the individual agricultural producers by enterprises, for processing or selling.

Sale of agricultural products from own production is external or internal sale and delivery of agricultural products from enterprises and agricultural cooperatives' own production.

Method of calculation

Indices are calculated by a relation between the monthly values at the level of products, groups and total, in the current and the base year.

Classifications

Data are presented according to the National Classification of Activities- NKD Rev.2, while the products are partly adjusted to the Classification of Products by Activities (CPA 2008).

CATERING TRADE AND SERVICES

Source and methods of data collection

The data are collected according to the reporting method through the regular quarterly statistical reports submitted by all business entities whose main activity is catering and other business entities which contain units that offer catering services.

Scope

Reporting units are all business entities that according to the National Classification of Activities - NKD Rev.2 are in the sector I, in the divisions 55 Accommodation and 56 Food and beverage service activities, as well as the business entities which in their structure have business units whose activity belongs to these divisions.

Definition

Turnover in catering trade and services is a value of realised board and lodging services, and other goods and non-goods services (like selling of tobacco, souvenirs, transport of guests and luggage, postal services, etc.) The value of turnover is expressed in current prices, including VAT.

Data on turnover by months are estimations obtained on the basis of analysis of the usual monthly seasonal variations and estimations of the turnover trend. These estimations, after the end of the quarter, are corrected on the basis of the results of the quarterly reports.

TOURISM

Source and methods of data collection

The data are collected according to the reporting method through the regular monthly statistical reports submitted by all accommodation establishments and other business entities engaged in tourism accommodation (hotels, boarding houses, motels, vacation facilities, camps, etc.)

Scope

Reporting units are all business entities that according to the National Classification of Activities - NKD Rev.2 are in the sector I, in the division 55 Accommodation, as well as business entities which in their structure have business units whose activity belongs to this division.

Nevertheless, certain number of tourists and their nights spent are not included, because tourists, particularly those in private rooms, cottages and those staying with relatives and friends, remain unreported.

Definitions

Tourist is any person who temporarily spends at least one night in some accommodation establishment not located in his or her usual place of residence.

Domestic tourist is a person with permanent residence in the Republic of Macedonia who is temporarily present at some other place, other than his/her usual place of residence, and who spends at least one night in some accommodation establishment.

Foreign tourist is considered to be anyone, permanently resident outside the Republic of Macedonia, who is temporarily present in the Republic of Macedonia and who spends at least one night in some accommodation establishment.

The actual definitions are harmonised with the Directive 95/57/EC.

INDUSTRIAL PRODUCER PRICES ON THE DOMESTIC MARKET, INPUT AND OUTPUT PRICES IN AGRICULTURE, AND PRICES OF CATERING SERVICES

Sources and methods of data collecting

Industrial producer prices on the domestic market are collected monthly from selected industrial enterprises, for a defined number of products. The selection of enterprises is carried out according to their significance in the total production. Average annual prices are calculated according to the system of unweighted prices taken as an average for 12 months.

Sources of data on input and output prices are the monthly reports gathered from business entities engaged in wholesale trade, cooperatives and agricultural holdings that sell goods for current consumption in agriculture and products from agricultural production sold outside the sector.

The prices of catering services measure the level of the retail prices of catering services carried out in catering units (hotels, motels and restaurants).

The prices of catering services are monitored with the survey C.31 in selected catering units: hotels with restaurants, motels with restaurants and restaurants, in the period from 18th-20th of a month. Prices are monitored from the menu with quoted sell-prices on the day of monitoring. Units of measurement according to which prices are monitored are quoted in the survey form and they are usual for the selected products and services.

Scope

Industrial producer prices on the domestic market are monitored in the Monthly Survey on Industrial Producer Prices on the Domestic Market, C.41, in 266 industrial enterprises in the Republic of Macedonia. The survey covers 614 industrial products with purposive sample.

Input prices in agriculture are monitored monthly for approximately 80 products that business entities sell to individual agricultural producers for current uses in agricultural production.

Output prices in agriculture are monitored monthly for approximately 110 products that business entities purchase from individual producers, as well as sales of agricultural enterprises' own production.

Price indices of catering services are monitored monthly in 27 selected business units for 65 catering services in 8 cities in the Republic of Macedonia.

Definitions

The industrial producer price is the price at which the producer sells the products to the network of wholesale and retail distributors in the largest quantities, **on the domestic market**, loaded free on rail or truck where the producer is located, or it is the price at which the producer deals with other producers. This price includes producer subsidies, if the seller receives them according to the regulations, but deducts commercial rebates, discounts, cash discounts and similar reductions offered by the seller. VAT and excise are also deducted from the price.

Input in agriculture covers goods, services and investment that agricultural producers invest currently for continuous development in agricultural production. **Output in agriculture** covers production in the agricultural sector, purchased or sold outside the sector.

Input prices are prices that agricultural producers have paid for purchasing the necessary goods and for the performed services and the investments which were necessary for unobstructed agricultural production. VAT is deducted from the prices. **Output prices** are prices paid to agricultural producers for purchasing agricultural products, or for sales from agricultural enterprises' own production. VAT is deducted from the prices.

Prices of catering services are prices at which catering units sell their services to customers for food, beverages and accommodation. VAT is included in the prices.

Method of calculation

The industrial producer price index on the domestic market, for different levels of the National Classification of Activities (total, by main industrial groups, sectors, divisions), is calculated in two steps: in the first step by weighting the individual producer price indices on the domestic market, and in the second step by weighting with corresponding weights for different levels.

The weighting coefficients for the products from the National Nomenclature of Industrial Products used for calculation of the industrial producer price index on the domestic market are calculated on the basis of the value of the turnover on the domestic market given in the Annual Report on Industry.

Input and output price indices in agriculture are calculated by weighting the price indices, based on the share (2003-2005) of the average value of purchased products at purchase prices (input) and the average production value (2003-2005) at current prices (output).

Given the seasonal nature of agricultural production, and especially vegetables and fruits, variable monthly weights are used when calculating price indices. The weights are calculated based on the participation of certain products in the months during the year.

The price index of catering services is calculated by weighting the price indices with the structure of values of services realized in the catering units.

Price indices are calculated by using Laspeyres formula:

$$I_{t/o} = \frac{\sum_{i=1}^n \frac{P_{ti}}{P_{oi}} * W_{oi}}{\sum_{i=1}^n W_{oi}}$$

- $I_{(t/o)}$ - index
- $P_{(ti)}$ - price of the product/service "i" in the current month
- $P_{(oi)}$ - price of the product/service "i" in the base period
- $W_{(oi)}$ - weight of the product/service "i" in the base period
- n - number of products/services

Classifications

Classifications used for collecting data for the Monthly Report on Industrial Producer Prices on the domestic market and for publishing the results are: the National Classification of Activities - NKD Rev.2 (Official Gazette No. 147/2008) and the National Nomenclature of Industrial Products (Official Gazette No. 75/2009).

Data on output price indices in agriculture are collected and calculated according to the National Nomenclature of Agricultural Products and Services.

CONSTRUCTION COST INDICES FOR NEW RESIDENTIAL BUILDINGS

Sources and methods of data collection

The total Construction costs index for new residential buildings is composed of two components: Material costs index and Labour costs index.

The source for calculation of the Material costs index are the data on the industrial producer prices on the domestic market for the materials and elements that are incorporated in the building, while the calculation of the Labour costs index is based on the data on the average monthly gross wages paid per employee in the construction section, by divisions.

Method of calculation

The Construction costs index for the new residential buildings is calculated as the average of the Material costs index and the Labour costs index.

The weights for the calculation of the total Construction costs index are derived from the annual accounts of the enterprises from the construction section in 2005.

The Material costs index is calculated from 92 selected materials and elements for incorporation in construction, which according to the NNIP/2008 belong to the following classes:

08.12; 16.10; 16.21; 16.23; 20.30; 20.52; 20.59; 22.21; 22.23; 23.12; 23.31; 23.32; 23.42; 23.51; 23.52; 23.61; 23.62; 23.63; 23.64; 23.69; 23.70; 23.99; 24.10; 25.11; 25.21; 25.93; 27.32.

The index is calculated by using the Laspeyres formula.

The weights for calculation of the Material costs index are derived from the value of spent building materials from the "Annual Report on Spent Building Materials" in 2005.

The distribution in the construction section is made according to the "Classification of Types of Constructions (CC)", with the structure of the value of completed works of the "Annual Report on Constructions on Which Works have been Carried Out" in 2005.

The Labour costs index is calculated from the average monthly gross wage per employee in the construction section, by divisions.

The distribution by divisions of the construction section is made according to the "Classification of Types of Constructions (CC)", with the structure of the value of completed works of the "Annual Report on Constructions on Which Works have been Carried Out" in 2005.

Classifications

The following classifications have been used in the calculations:

- National Classification of Activities - NKD Rev.2 (Official Gazette No. 147/2008);
- National Nomenclature of Industrial Products (Official Gazette No. 75/2009) (Prodcom/2008);
- Classification of Types of Constructions (CC).

RETAIL PRICES AND CONSUMER PRICES

Data on **retail prices** of goods and services are the result of regular monitoring of prices, including agricultural and industrial retail prices, as well as service prices. Retail prices are monitored in 8 cities in the Republic of Macedonia. Prices of industrial products and services are monitored once a month, while agricultural products are monitored twice a month (the first and the third week of the month).

Starting from January 2006, the prices of oil derivatives are monitored from the 26th day of the previous month till the 25th day of the current month, in order to scope all price movements within the reported month.

Average monthly prices in the Republic of Macedonia are calculated by weighted arithmetical mean, whereby average prices in particular cities are weighted with the sold quantity of certain articles in those cities.

Starting from January 2012, average monthly prices by cities are calculated by average-geometrical mean.

Average monthly prices for the agricultural products are calculated as average of both reported periods.

Average annual prices of the products and services are obtained by an non weighted average-arithmetic mean of prices for 12 months.

Scope

In 2012, retail turnover prices are monitored in 8 cities in the Republic of Macedonia, for 48 agricultural products, 147 food-industry products, 259 non food-industry products and 149 types of services.

When selecting products for monitoring of prices, only products with significant retail turnover are considered.

Definitions

Retail prices are the prices at which the products and services are sold to the final consumers by retailers, individual producers and service providers. VAT is included in retail prices.

Price indices

The Retail price index and the Consumer price index are calculated on the basis of average monthly retail prices, their dynamics and the structure of personal consumption.

Indices are calculated by means of the following formula:

$$I_{t/o} = \frac{\sum_{i=1}^n \frac{P_{ti}}{P_{oi}} * W_{oi}}{\sum_{i=1}^n W_{oi}}$$

$I_{(t/o)}$ - index

$P_{(ti)}$ - price of the product/service "i" in the current month

$P_{(oi)}$ - price of the product/service "i" in the base period

$W_{(oi)}$ - weight of the product/service "i" in the base period

n - number of products/services

The Consumer price index is calculated on the basis of a special list of products and services for personal consumption of households, the average monthly retail prices of these goods and services, and their individual price indices weighted according to a personal consumption pattern.

While calculating the consumer price indices, besides the national classification, COICOP (Classification of Individual Consumption by Purpose) is also used as an international standard, which is a classification of the personal consumption by purpose. It is used by the European Union member states for calculation of the Harmonized Index of Consumer Prices, which is used as an indicator of inflation.

LABOUR FORCE SURVEY

Sources and scope of the Survey

The Labour Force Survey is the most exhaustive research on the economic activity of the population and its demographic, educational and other characteristics in the period between the censuses.

The Survey is conducted on a sample of 11250 households (7200 households until 2003) on the whole territory of the country. Until 2003, the Labour Force Survey was conducted as an annual Survey and since 2004 it is being conducted as a continuous Survey, on a weekly basis, throughout the year, while the data processing is done quarterly and annually.

Units under observation in the Survey are: the households and the persons from 15 - 79 years of age.

The adherence to the international recommendations of the International Labour Organization (ILO) and the EU Statistical Office (Eurostat) enables international comparability of the data, but it also means application of definitions of the labour market's basic categories that differ from the ones established by the national legislation in this area.

The final concept of the Survey is established taking into account the specifics of the Republic of Macedonia in this area.

Definitions

Working age population comprises every person between 15 and 79 years of age.

Economically active population comprises all employed and unemployed persons (labour force).

Following the recommendations of the ILO, in the employed are included persons of 15 years of age and over, who:

- During the reporting week have worked for money (in cash or in kind) or for profit at least one hour;
- During the reporting week were temporarily absent from work (because of illness; leave of absence; studies; cessation of the activity of the business entity etc.), but had a job.
- Were helping on the family estate or in the family enterprise without pay.

According to the EUROSTAT and ILO standards as unemployed are considered the persons from 15 to 74 years of age who meet the following three conditions:

- During the reporting week they did not work (according to the above mentioned criteria);
- Have searched actively for a job or have taken concrete activities to find a job;
- Were prepared to accept work in the reporting week or in the week that followed.

The persons that are not included in both categories make up the group of those that are not in labour force:

- Pupils and Students
- Pensioners
- Housewives (who only perform activities in their household)
- Persons who are supported by others or by the state or who support themselves with a different kind of income (interests, rents).

The main indicators for monitoring the changes of the labour force are:

- Activity rate as a share of the labour force in the total population aged 15 years and over;
- Employment rate as a share of the number of employed in the total population aged 15 years and over;
- Unemployment rate as a share of the number of unemployed in the total labour force.

The reporting period to which the questions are related is the week before the week of conducting the Survey.

WAGES AND EMPLOYMENT

Sources and scope of statistical survey Labour - 1

The Monthly Statistical Survey Labour.1 monitors the average paid gross and net wages per employee, as well as the employees from the personnel records, through collecting reports from the business entities, with a monthly periodicity. Sources of data are the reporting units in private and other (public, state, cooperative and mixed) ownership, which perform different activities. The survey excludes the Macedonian representatives in foreign countries, the persons who independently perform an activity - profession and their employees, and the individual farmers.

The Monthly Survey is based on the sample of reporting units intentionally chosen, respecting the criterion of at least 70% representation of the employed in every section of the National Classification of Activities - NKD Rev.2. The reporting units fill in reports every month, which provide data on the total paid gross and net wages per employee, the total number of employees at the end of the pre-reference month, the number of persons hired during the reference month, the number of persons who had left the job during the reference month, the total number of employees and the number of employed women at the end of the reference month.

Definitions

Total paid gross wages cover: paid net wages for the reference month, paid personal tax and paid contributions for: retirement and disability insurance, for health insurance, for employment, for professional disease.

Total paid net wages cover: paid net wages for the reference month for the work done in the full-time work, less than full and more than full-time work (overtime work), payments in respect of annual vacation by the enterprise, as well as public holidays, paid leave up to seven days, paid leave for educational purposes, for sick-leave up to 30 days, etc., payments for time spent in the army upon invitation of a state body, protection and civil services, etc., supplements of net wages for previous months paid during the reference month (backward payments), payments based on periodical and final account, profit-sharing bonuses, regardless of the period they refer to.

The survey includes all employed persons that have a work contract (for definite or indefinite time), as well as whether they work full-time, less than full or more than full-time in business entities of all kinds of ownership and the state administrative bodies, local self-government bodies, the political parties, the public organizations and associations in the Republic of Macedonia.

This survey does not cover: persons such as Macedonian representatives in foreign countries, persons who perform independently an activity - profession and their employees, and the individual farmers.

Methods of calculation and indices

Average paid gross and net wages per employee are calculated as a ratio between the total gross and net wages and the total number of employees who received payments.

Nominal indices of paid gross wages are calculated from the absolute value of the average gross wages, while the real indices represent the ratio between the nominal indices and the consumer price indices.

Nominal indices of paid net wages are calculated from the absolute value of the average net wages, while the real indices represent the ratio between the nominal indices and the consumer price indices.

Classifications

National Classification of Activities - NKD Rev.2

NATURAL CHANGE IN POPULATION

The data on births, deaths and marriages are taken from the administrative sources-relevant registers, while the data on divorces from the records of the relevant courts.

Statistics on births comprise live births and still births.

Statistics on deaths comprise all cases of death.

Statistics on marriages cover the marriages contracted according to the legally prescribed manner, i.e. marriages registered in the Record of Marriages.

Statistics on divorces refer to divorces in the relevant court.

Taking into account the need for presenting as realistic a picture as possible of the demographic appearances in the Republic of Macedonia and of the adaptation to the standards of the European Union, starting from 2004, the State Statistical Office made changes in the methodology of presentation of vital statistics. The number of births, deaths, marriages and divorces shows only the events which occurred in the Republic of Macedonia.

Definitions

Live birth is any child who after separation (complete removal from its mother) shows any signs of life (breathing or heart beat), irrespective of how long that child was alive. If the child died soon after separation, first it is registered as live birth and then, as an infant death.

Stillbirth (foetal death) is any child separated from the mother's body without any signs of life, but only if the gestation period was not less than 28 weeks.

Deceased person is every live birth in which there is a permanent disappearance of all vital functions.

Infant deaths - deaths of infants before reaching first year of age.

Natural increase of the population is the difference between the number of live births and the number of dead persons in a given period of time.

The natural increase can be positive, when the number of live births is higher than the number of dead persons, and negative, when the number of live births is lower than the number of dead persons.

Vital index is a relative indicator which shows the ratio between the number of live births and the number of dead persons.

Divorce is a final dissolution of a marriage by a valid decision by the municipal court in charge.

* in September 2012, a revision of data was performed for:

- 2011 in the category: direct investments, income and other investments – the reason was inclusion of data from the annual questionnaire on foreign investments DI 22 and better scope of data on credit indebtedness;
- all components for 2010 and 2011 - as a result of better data scope;
- 2010 - goods, services and trade credits, based on definitive data on external trade.

1) Preliminary data (revision shown on web site: www.NBRM.gov.mk)

2) Imports data are on fob basis in accordance with IMF V Balance of Payments Manual. Calculation of cif / fob factor as % of imports cif for 2006 and 2007 is 4.14% and for 2008 is 3,86%. Imports for 2006, 2007 and 2008 have been additionally adjusted with time adjustments for imports of electricity.

3) Excluding monetary gold and exchange rate differences

4) Methodological changes: The BOP data for 2009 include estimations for certain elements in the items on direct investment and income - based on actual data from the newly introduced data source (FDI Survey DI 22) available as with end 2008

INDUSTRY - PRODUCTION OF SELECTED GOODS¹⁾

	Unit of measurement	2011	2012		
			August	September	January - September
Mining of metal ores					
Copper concentrates	t	35 976	3 742	3 318	30 765
Lead concentrates	t	50 398	4 576	4 732	38 505
Zinc concentrates	t	56 264	4 502	4 979	41 640
Manufacture of food products and beverages					
Refined sunflower-seed and safflower oil and their fractions	t	33 139	2 940	2 842	25 322
Refined white cane or beet sugar in solid form	t	30 423	-	7 748	17 492
Spirits obtained from distilled grapewine or grape marc	hl	6 151	1 051	1 055	5 559
Denatured ethyl alcohol and other denatured spirits of any strength	'000 hl	830	-	-	442
Manufacture of tobacco products					
Cigarettes	million pieces	7 615	471	602	4 912
Fermented tobacco	t	24 796	1 530	386	20 562
Manufacture of textiles					
Wool yarn	t	-	-	-	-
Cotton yarn	t	547	37	46	382
Wool fabrics	'000 m ²	68	1	2	28
Cotton fabrics	'000 m ²	1 304	-	140	955
Manufacture of wearing apparel; dressing and dyeing of fur					
Workwear	'000 pieces	2 947	201	198	1 823
Underwear	'000 pieces	9 876	573	950	8 090
Shirts and blouses	'000 pieces	11 752	755	666	8 032
Manufacture of coke, refined petroleum products and nuclear fuel					
Motor gasoline	t	109 562	182	151	25 429
Gas diesel oil	t	237 134	110	-	39 634
Fuel oil, sulphur content >1%	t	245 553	-	-	52 385
Manufacture of chemicals and chemical products					
Nitrogen	t	13 270	1 051	1 030	9 765
Oxygen	t	21 750	1 375	1 501	12 803
Commercial medicines	kg	3 215 981	279 033	396 758	2 763 340
Detergents (liquid and powder)	t	2 577	42	35	1 077
Manufacture of other non-metallic mineral products					
Tiles	'000 pieces	17 709	1 489	1 467	13 499
Portland cement, excl.white	t	930 175	80 344	66 990	509 960
Bituminous materials	t	24 219	1 913	2 059	12 392
Manufacture of basic metals					
Rolled semi-finished products	t	348 576	14 109	15 579	191 052
Welded pipes	t	141 707	17 086	7 600	93 802
Ferro-alloys	t	124 215	7 765	7 380	64 383
Electricity, gas, steam and hot water supply					
Electrical power - total	MWh	6 717 900	461 011	382 405	4 782 313
Hydroelectric power	MWh	1 430 396	97 416	37 639	768 266
Thermoelectric power	MWh	5 287 504	363 595	344 766	4 014 047
