External Trade, 2000-2010

The external trade data are processed according to the special trade system (relaxed definition).

The export, according to this principle, comprises all the goods exported abroad and in the foreign customs warehouses and industrial free zones, and whose origin is from our domestic market, the premises for further processing and the industrial free zones.

The import comprises all goods, imported from abroad, from customs transit, customs warehouses and industrial free zones.

The value of goods is presented on the basis of prices agreed upon by enterprises when entering into agreements. All values for goods exported and imported were computed according to parity, free on Macedonian border.

For import the value is CIF type, i.e. freight and insurance costs from place of export in the exporting country to the national border of Macedonia are included in the value.

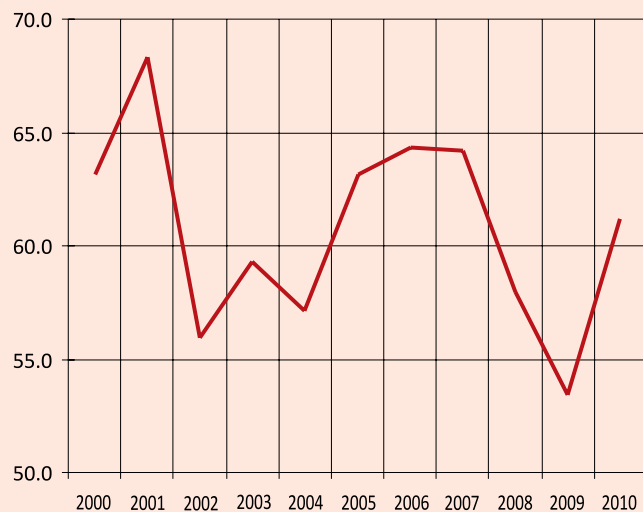

For export the value is FOB type, i.e. freight and insurance costs from place of export in Macedonia to the national border of Macedonia are included in the value.

The value of goods imported or exported after processing is the so called gross value – it includes the value of exported/imported goods (materials) plus the value of the service performed.

The value in national currency is recalculated into USD and EUR by using the daily exchange rate (middle average rate of the National Bank of the Republic of Macedonia) on the day of the lodgement of the customs declaration.
